botanicals, inc.

2025 - 2026

WELCOME 2025-2026

All of us at Green Fuse® Botanicals are proud to share our 2025-2026 offerings. With breeding concentrated in Somis, California, situated in a fully operational Lemon Grove, known to the community as Green Fuse® Grove. With a fully functional stock facility for domestically required products as well as one of the nation's largest tissue culture laboratories. The Green Fuse® laboratory opened for commercial sales in May of 2023. Since its opening, we have worked diligently to increase our capabilities to supply the market with revolutionary tissue cultured products. We have recently expanded our laboratory to enhance the availability of our most popular tissue cultured breeding. It is in these hills where we focus on you, our customer, and our commitment to advancing genetics. Our new facility clearly promotes our breeding directive and commitment to our growing partners. Green Fuse® Botanicals also owns and operates Calico™ Genetics, our internal breeding company as well as a liaison to our global network of breeding partners. Calico™ Genetics strives to not only deliver varieties with a purpose to the marketplace, but to orient all breeding to the ultimate goal of grower ready solutions.

Our grower advantage breeding clearly extends to our end gardening consumer. We are excited to share the continued expansion with you and welcome your visit. Domestic supply does not only ease demand for high minimums and high freight, but it most importantly puts the product into the growers' hands in the shortest possible time frame.

We at Green Fuse® Botanicals are constantly and systematically driven to the continuation of breeding breakthroughs delivered to the horticultural community. We are excited for new opportunities, such as the production and breeding of the world's first bioluminescent plant, Petunia Firefly. In conjunction with our fantastic partners, Light Bio and Raker-Roberta, we look to bring a whole new light to the industry.

It is the trust and support of you, our growing partners, which is the true strength of the program. We strive for our partnership to ensure success for us both this season and for many to come.

proudly offered by our partners at

Lifestyle Plants™ is our selection of plants designed for the changing lifestyle needs of our customers. Lifestyle Plants™ can be grown for outdoor seasonal color or as indoor house plants. Year-round availability brings all new options for seasonal programs. There are no boundaries to where we can bring color into our lives!

The breeding goal of the Green Fuse® Botanicals Optimum™ Annuals program is to deliver uniformity within each series for ease of production. Each color in each series will perform uniformly regardless of geography. The earliness to flower allows delivery any time of year.

The continued advancement of the Green Fuse® First Light® perennial program deliver another industry first! A complete program of zone hardy groundcovers that actually deliver color! Texture in foliage combined with the intensity of season long blooms. The Endless Ground Color program not only changes the game, but literally the ground!

The First Light® Perennial program contains first year flowering varieties that require no cold treatment (vernalization) to flower and are day length neutral. The goal of First Light® Perennials is to offer perennials that can be programmed to flower as you would annual selections. Schedule these selections to meet a desired week instead of waiting for the traditional photoperiod. This will not only remove many weeks of crop time allowing for additional rotations, but also dramatically saves on labor as the crops are able to always be fresh.

BEGONIA CITIZEN CANE® PINK

Citizen Cane® Pink will absolutely demand retail attention. Its crisp dark foliage with clean white polka dots lends well to foliage programs. It will also maintain massive strings of deep pink blossoms with strong fragrance all growing season. Tight internodes and strong stems allow for worry free shipping. Garden height is 18" to 20".

BEGONIA REX BEWITCHED®

The strong upright growth and incredible leaf structure on Bewitched® Series is just plain spooky! Noted for their cut leaf, the crisp colors, with deep veins is a must have for any Begonia Rex program. Finish times are blazing fast, just like the Dibs™, due to their aggressive growth pattern. A yearlong sales window, with such an excellent habit, it's just plain scary! Garden height is 15" to 18".

BEGONIA REX DIBS™

Begonia Dibs™ are spectacular! Unsurpassed vigor and basal branching make Begonia Dibs™ a completely new breeding portfolio for Rex Begonia. All NEW this year are Amber and Midnight that complete the assortment with trending color palettes. Best suited for containers 6" and up, the Dibs™ crush traditional rex timing standards. Perfectly suited for holiday sales as well as spring color pots. Garden height is 12" to 15".

DIONAEA VENUS FLY TRAP

Always a crowd favorite, Venus Fly Trap delights with its attitude and year round sales potential. As a virus indexed tissue culture plant, it may now be a grower favorite as consistent, successful growing is all but guaranteed! Garden width is 4" to 6". Zone 7

HOSTA

A high vigor hosta supplied via Tissue Culture, Old Yeller® produces an aggressive habit on large deep golden leaves. Old Yeller® will flaunt its golden color all season long resisting the summer fade of the traditional Hosta. Gator Cup® Gold demands attention with highly corrugated leaves and upright habit while still maintaining the vigorous habit of Old Yeller®. Garden height is 18" to 24". Zone 4

Gator Cup™ Gold

GAILLARDIA LUNAR®

Gaillardia Lunar® are sturdy garden performers even in the most arid of climates. Their massive flowers are early to bloom and sit tightly on top of their well-rounded habit. Tightly packed internodes have strong resistance to splitting as the flowers develop. They are excellent in our Perennial Compatibles® mixes. Garden height is 6" to 10". Zone 5

LEUCANTHEMUM

Green Fuse® Botanicals may be best known for our consistent and reliable shasta daisy offerings. All do not require any vernalization and are daylength neutral. These key breeding attributes allow scheduling year round and nation wide. We were the first to offer neutral Leucanthemum and keep this passion going with the first groundcover shasta in Carpet Angel® and the world's largest flowering in Kilimanjaro®. All have been both zone and grower tested.

BLOOM SIZE COMPARISON

DARLING DAISY®

Leucanthemum Darling Daisy® has a short stature and a small, pure white daisy flower. Darling Daisy® are continuous flowering, so they are easy to finish for early sales. Perfect for quarts and gallon containers. Garden height is 6" to 8". Zone 6

DOUBLE DARLING DAISY®

With a fully double flower and compact habit, Double Darling Daisy® is positioning itself as a crowd favorite. The snowball shaped flowers sit cleanly on this day length neutral selection for a tidy appearance throughout the entire growing season. Garden height is 8" to 10". Zone 5

DARLING DAISY® SUPREME

It is easy to see the supremacy of Darling Daisy® Supreme! With industry exclusive breeding program to develop multiple flowering branches along the same stem, Darling® Supreme rarely cycles out of color. This is a clear advancement of all Leucanthemum breeding. Garden height is 12" to 15". Zone 4

ANGEL DAISY®

Angel Daisy® is so early to flower, it makes production planning a snap. Angel Daisy® has anemone flowers that transitions to pure white. Excellent for containers or as a mixed element. Garden height is 8" to 12". Zone 4

DOUBLE ANGEL DAISY®

The Double Angel Daisy® throws a massive number of fully double flowers all season long. With a habit matching the industry leading Angel Daisy® perfectly, Double Angel Daisy® will boast the same finishing time and garden performance with a unique flower formation. Garden height is 8" to 12". Zone 4

WHISKER® WHITE

A complete reinvention of the "crazy daisy" type of shasta. Whisker® White is completely day length neutral and requires zero cooling hours to bloom. This is scheduling ease for all growers. Its massive five to six inch flowers will continue in the garden all growing season. Garden height is 15" to 18". Zone 4

BETSY™

Betsy™ is absolutely remarkable with its massive flower size of over five inches across! Day length neutral and repeat flowering, Betsy™ will blow you away! Thick petals translate into a single flower holding beautifully on the plant for multiple weeks. Geared for larger container production, Betsy's™ robust stature will impress! Garden height is 18" to 20". Zone 4
